# 2022 Care-Based Incentive WOrkbook

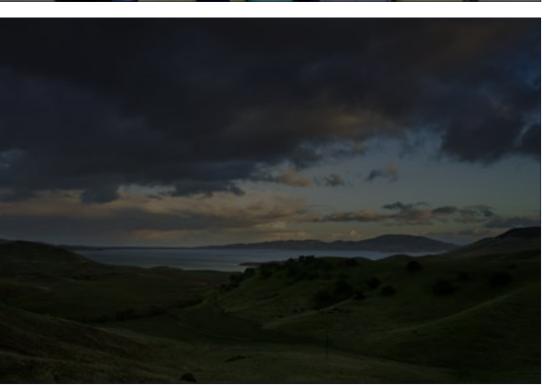

#### **PROVIDER INCENTIVES**

## Alliance Vision: Healthy people. Health communities.

Alliance Mission: Accessible, quality health care guided by local innovation.

## **INSIDE WORKBOOK**

#### **Incentive Summary**

04 CBI Incentive Summary

#### **Tip Sheets**

- 21 Adverse Childhood Events (ACEs) Screening in Children and Adolescents
- 23 Breast Cancer Screening
- 25 Screening for Depression and Follow-up Plan

## WELCOME!

Use this workbook during the 2022 Care-Based Incentive (CBI) workshop.

This year's focus will be:

- Program Overview
- What's New?
- Modified Measures
- Exploratory Measures
- Retired Measures
- Resources

Use the index on the left to follow along during the workshop.

#### PROVIDER INCENTIVES

## **Care-Based Incentive (CBI) Summary**

The Central California Alliance for Health's Care-Based Incentive (CBI) program is comprised of a set of measures encouraging preventive health services and connecting Medi-Cal members with their primary care provider (PCP).

The CBI Program consists of Provider Incentives that are paid to qualifying contracted provider sites, including family practice, pediatrics and internal medicine. Provider incentives are broken into:

- Programmatic measures which are paid annually based their rate of performance in each measure.
- Fee-For-Service (FFS) measures which are paid quarterly when a specific service is performed, or a measure is achieved.

The Alliance also offers incentives to members through the **Health and Wellness Rewards Program**, which are paid directly to members. Members are eligible for these incentives if they are enrolled with Medi-Cal through the Alliance.

This incentive summary provides an overview of the 2022 CBI program. For more information about provider incentives visit the <u>CBI Resources page</u>. For more information on member incentives visit the <u>Member Incentives</u> <u>page</u>. For general questions, talk with your Provider Relations Representative.

HEALTHY PEOPLE. HEALTHY COMMUNITIES.

4 I Central California Alliance for Health

## **2022 Summary of Changes**

#### **New Programmatic Measures:**

- Breast Cancer Screening has been moved from an exploratory to programmatic measure.
- Screening for Depression and Follow-Up Plan has replaced the Antidepressant Medication Management measure.

#### **Measure Changes:**

- Plan All-Cause Readmission points have been redistributed to the Post-Discharge Care measure.
- Points from Ambulatory Care Sensitive Conditions and Preventable Emergency Visits have been reallocated to the Quality of Care Measures.
- The Joint Commission (TJC) PCMH certification has been removed from the Behavioral Health Integration FFS measure as a standalone qualification.

#### **New Exploratory Measures:**

- Adverse Childhood Experiences (ACEs) Screening in Children and Adolescents
- Health Plan Health Disparity

#### **Retired Measures:**

- Antidepressant Medication Management
- Maternity Care: Postpartum
- Maternity Care: Prenatal

## Adverse Childhood Experiences (ACEs) Screening in Children and Adolescents – Exploratory Measure Tip Sheet

#### **Measure Description**

The percentage of members ages 1-21 years of age who are screened for Adverse Childhood Experiences (ACEs) annually using a standardized screening tool.

#### Exploratory Measure in 2022

This is an exploratory measure; there is no payment for 2022. For additional information, refer to the <u>2022 CBI</u> <u>Technical Specifications</u>.

#### **Eligible Members**

Eligible members are those ages 1-21 years between January 1<sup>st</sup> and December 31<sup>st</sup> of the measurement year who are continuously enrolled for 4 months.

#### **Coding Requirements**

Online training and attestation are required to receive payment and to be compliant for the measure.

Data will be collected via claims. When screenings are performed providers must use the following HCPCS codes depending on the test result.

- **G9919** score **4 or greater (high risk)**, results are positive.
- G9920 score between 0 3 (lower risk), results are negative.

Note: FQHCs will need to bill the HCPCS codes listed above on a separate claim than the office visit.

#### Screening Tools

Documentation must include a standardized ACE screening tool. Screening tools <u>do not</u> need to be sent to the Alliance. However, please make sure the tool is in the patient's medical record.

- ACEs questionnaire for adults (ages 18 years and older).
- Pediatric ACEs and Related Life-events Screener (PEARLS) for children (ages 0 to 19 years).

www.thealliance.health

For more information on the types of screening tools, please see the ACES AWARE <u>Screening Tools</u> resources.

HEALTHY PEOPLE. HEALTHY COMMUNITIES.

21 I Central California Alliance for Health

#### **Best Practices**

- ACEs are linked to chronic health problems, mental illness, and substance use problems in adulthood. ACEs can also negatively impact education, job opportunities, and earning potential.
- Train clinical and non-clinical staff on ACE and toxic stress screenings:
  - o Provider training: Becoming ACEs Aware in California Training.
- All non-clinical staff should receive training on ACEs as part of onboarding new staff, as well as have an annual refresher.
- <u>Incorporate screening procedures</u> into the ongoing healthcare of children and adolescents. This increases the chances that previously undetected ACEs or toxic stress can be identified<sup>i</sup>.
- Have staff **role play administering the ACE screening** to practice before implementing screenings in your clinic.
- **Pilot administering the ACE screening**s to patients and then discuss as a clinic of what improvements to the workflow can be made.
- When <u>mandatory reporters</u> are screening for ACEs, they are required to report suspicion of child abuse; see <u>Joint letter from California Department of Social Services and California Department of Health Care Services, and Office of the California Surgeon General.</u>
- Raise awareness of ACEs<sup>ii</sup>:
  - Enhanced primary care.
  - o Victim-centered services.
  - Treatment to lessen the harms of ACEs.
  - o Treatment to prevent problem behavior and future involvement in violence.
  - Family-centered treatment for substance use disorders.
- Provide parents, adult, and adolescent patients with Self-Care Tools:
  - o <u>ACEs Aware Self-Care Tool for Adults</u>
  - o ACEs Aware Self-Care Tool for Pediatrics

#### Resources

- **California's** <u>ACEs AWARE</u> Initiative offers Medi-Cal providers training, screening tools, clinical protocols, and payment for screening children and adults for ACEs.
  - Effective January 1, 2020, qualified <u>Medi-Cal providers are eligible for a \$29 payment</u> for screening patients up to age 65 with full-scope Medi-Cal using a qualified screening tool. This payment is available through <u>California's Proposition 56 Payment Program</u> and is not associated with the Alliance's Care-Based Incentive Program.
- American Academy of Pediatrics: <u>The Resilience Project</u>
- <u>CDC's ACE resources</u>
- Video on administering a PEARLS Resilience De-identified, positive and negative screening.
- AAP's Family and Caregiver Resources.
- ACE Screening Clinical Workflows.
- <u>ACE Screening Implementation How-To Guide</u>
- Trauma-Informed Network of Care Roadmap

Updated 10/06/2021 HEALTHY PEOPLE. HEALTHY COMMUNITIES. 2022 Care-Based Incentive (CBI)

#### PROVIDER INCENTIVES

### **Breast Cancer Screening Tip Sheet**

#### **Measure Description**

The percentage of women 50–74 years of age who had a mammogram to screen for breast cancer on or between October 1 two years prior to the Measurement Period and the end of the Measurement Period.

#### Incentive

Incentives will be paid on an annual basis, following the end of Quarter 4. For additional information, refer to the 2022 CBI Technical Specifications.

#### **Exclusions**

Members in hospice or receiving hospice services or palliative care during the measurement year.

Members 66 years of age and older as of December 31 of the measurement year with frailty **and** advanced illness:

- At least one encounter for frailty during the measurement year.
- At least one of the following during the measurement year or year prior to the measurement period: •
  - At least two outpatient, observation, emergency department (ED) visits or non-acute inpatient encounter on a different date of service (DOS), with an advanced illness diagnosis. Visit types must be the same for the two visits.
  - At least one acute inpatient encounter with an advanced illness diagnosis.
  - Dispensed dementia medication.

Members who had a bilateral mastectomy or two unilateral mastectomies at any time prior to December 31 of the measurement year will be excluded.

#### **Coding Requirements**

Members meet eligibility if they had one or more mammograms any time on or between October 1 two years prior to the measurement year and December 31 of the measurement year.

#### Acceptable codes include:

Digital broast	77061			
Digital breast	77062			
tomosynthesis	+77063 (TAR required if under 40)			
Diagnastis mammaguan	77065			
Diagnostic mammogram	77066			
Screening mammogram	77067			

**Note:** All types and methods of mammograms (screening, diagnostic, film or digital breast tomosynthesis) qualify for compliance. Do not count MRIs, ultrasounds or biopsies.

23 I Central California Alliance for Health

To indicate a member's history of bilateral mastectomy, report ICD-10 code Z90.13 on any claim at least once during the measurement period or submit via the Data Submission Tool on the Provider Portal. This code should NOT be listed as a primary diagnosis.

#### Data Collection

Data for this measure will be collected using provider data submissions via the Data Submission Tool on the <u>Provider Portal</u>, and claims. To find gaps in data:

- 1. Run a report from your Electronic Health Record (EHR) system.
- 2. Manually compile patient data (Example: Download monthly breast cancer screening quality report on the Provider Portal and compare to EHR).

#### How to Submit Data

This measure allows providers to submit bilateral mastectomy information from the clinic EHR system or paper records to the Alliance at the end of the measurement year by uploading data files to the Data Submission Tool on the <u>Provider Portal</u>. Data must be submitted as a CSV file. Step-by-step instructions are available in the Data Submission Tool Guide on the <u>Provider Portal</u>.

#### **Best Practices**

- Educate female members about the importance of early detection and encourage screenings.
- Make yearly mammograms a standard part of discussion during every visit.
- **Designate a care team member** to use the Alliance's Provider Portal reports to do chart review and call members who are due for this important screening.
- Note that some imaging/mammography centers require a referral. Send referrals to imaging centers at the end of clinic day instead of batching to the reduce number of lost referrals. The Alliance does not require prior authorization.
- Incorporate standing orders for breast cancer screenings into your daily practice.
- Assist members with scheduling appointments with imaging centers while they are in the office or provide members with a list of nearby contracted imaging/mammography centers.

## Screening for Depression and Follow-Up Plan Tip Sheet

#### Measure Description

The percentage of members 18 to 64 years of age who are screened for depression on the date of the visit using an age-appropriate standardized depression screening tool, and if positive, a follow-up plan is documented on the date of the positive screen.

#### Incentive

Incentives will be paid on an annual basis, following the end of quarter 4. For additional information refer to the <u>2022 CBI Technical Specifications.</u>

#### **Coding Requirements**

The Alliance will reimburse providers who provide depression screening, and if warranted, a follow-up plan documented on the date of the positive screen.

Code Type	Code	Code Description
HCPCS	G8431	Screening for depression is documented as being positive and a follow-up plan is documented.
HCPCS	G8510	Screening for depression is documented as negative, a follow-up plan is not required.

#### **Data Collection**

Data for this measure will be collected using claims. To find gaps in data:

- Run a report from your Electronic Health Record (EHR) system.
- Manually compile patient data (Example: Download the quarterly depression screening CBI report on the Provider Portal and compare to EHR).

#### **Provider Requirements**

Primary care providers to administer a standardized depression screening tool and, if positive, document a follow-up plan. The date of the encounter and screening must occur on the same date of service and the name of the tools must be documented in the medical record.

#### Follow-Up Plan

Documented follow-up plans can include:

• Additional screening at the same encounter as the initial positive screen (additional screen alone does not count toward a valid follow-up intervention to an initial positive screen). Examples are: additional evaluation or assessment for depression such as psychiatric interview or evaluation, assessment for bipolar disorder.

Updated 08/31/21

HEALTHY PEOPLE. HEALTHY COMMUNITIES.

- Suicide risk assessment (e.g. Beck Depression Inventory or Beck Hopelessness Scale).
- Referral to a practitioner who is qualified to diagnose and treat depression (e.g. psychiatrist, psychologist, social worker, mental health counselor).
- Referral to a program or other mental health service (e.g. family or group therapy, support group, depression management program, other service to treat depression).
- Pharmacological intervention.
- Other interventions or follow-up.

#### **Exclusions**

Active diagnosis of depression (examples include but not limited to: major depressive disorder, vascular dementia with behavioral disturbance, dysthymic disorder, postpartum depression, other mental disorders complicating pregnancy), bipolar disorder.

#### **Documentation Requirements**

Patient medical records must document:

• The name of the depression screening tool. If this is positive, documentation of the follow-up plan (must be on the same date as the positive screen).

#### **Screening Tools**

Screening is only reimbursable with a validated screening tool. Screening tools do not need to be sent to the Alliance and must be maintained in the patient's medical record. Example tools include:

Instruments for Adults	Results Considered as Positive Finding
Patient Health Questionnaire (PHQ-9)	Total Score ≥ 5
PRIME MD-PHQ2	Total Score ≥ 3
Beck Depression Inventory (BDI or BDI II)	Total Score ≥ 10 and ≥14 respectively
Center for Epidemiologic Studies Depression Scale (CES-D)	Total Score ≥ 16
Depression Scale (DEPS)	Total Score ≥ 9
Duke Anxiety-Depression Scale (DADS)	Total Score ≥ 5
Geriatric Depression Scale (GDS)	Total Score ≥ 10
Cornell Scale for Depression in Dementia (CSDD)	Total Score > 10
Hamilton Rating Scale for Depression (HAM-D)	Total Score ≥ 8
Quick Inventory of Depressive Symptomatology Self-Report (QID-SR)	Total Score ≥ 6

Perinatal Screening Tools	Results Considered as Positive Finding
Edinburgh Postnatal Depression Scale	Total Score > 13
Postpartum Depression Screening Scale	Total Score ≥ 60
Patient Health Questionnaire 9 (PHQ-9)	Total Score ≥ 5
Beck Depression Inventory (BDI or BDI II)	Total Score ≥ 10 and ≥14 respectively
Center for Epidemiologic Studies Depression Scale (CES-D)	Total Score ≥ 16
Zung Self-Rating Depression Scale	Total Score ≥ 50

Updated 10/12/21

#### **Best Practices**

- Complete screening annually in addition to clinical judgment, consideration of risk factors, comorbid conditions, and member life events (e.g. pregnancy).
- For those with a history of depression, screen at each visit.
- Medical Assistant administers initial depression screen and documents results.
- Screen patients at least once during the perinatal period for depression and anxiety symptoms.
- Screen for postpartum depression at the infant's one, two, four, and six-month well-child visits and beyond.
- Utilize collaborative care interventions involving multifaceted care team approaches (e.g. primary care physician, case manager with mental health background, psychiatrist, etc.).
- Implement a call back program for reaching out to patients with positive screens to keep engagement.
